Definitions

***Market Value Adjustment (MVA)**

MVA is an adjustment to account for changes in the interest rate environment since contract inception that is applied to withdrawals and surrenders that exceed the 10% free withdrawal amount during the first 7 contract years. MVA does not apply upon payment of death benefit. State variations may apply.

****Enhanced Guaranteed Surrender Value (EGSV)**

The EGSV equals 100% of your premium payments, minus any withdrawals and applicable withdrawal assessments, plus interest credited at 1%.

Risk Factors:

There are risks associated with any product linked to this Index:

- Allocation to a crediting method using the Index provides the potential for interest to be credited based in part on the performance of the Index.
- The Index may not increase in value due to a number of factors, and as a result, there may be no interest credited to the annuity contract.
- Because the Index is managed to a volatility target, the Index performance will not match the performance of the underlying Index components and may dampen the performance of the Index in rising markets.
- The Index has a limited performance history, and past performance is no indication of future performance.
- The Index may be composed of a small number of index components at any given time and the performance of the index involves risk associated with international and U.S. equities and bonds, commodities and precious metals, which may impact the Index value and the interest credited to the annuity contract.
- Premium allocated to a crediting method using the Index is not a direct investment in the stock markets, bond markets, commodities, precious metals or in the index.
- Purchasers of products linked to the index will have no access to the components underlying the Index.
- The Index is calculated on an excess return basis.

Riders are available for additional expenses.
